## Social media messaging – World Hand Hygiene Day (WHHD), 5 May

## Introduction

This year's WHHD campaign theme recognizes people at all levels can work together on *clean hands* to positively influence the culture and climate of safety and quality in health care delivery. Conversely, a strong quality and safety culture will encourage and support people to clean hands at the right times and with the right products. The slogan for this year's campaign is '**Unite for Safety – clean your hands**'.

To secure appropriate behaviours and attitudes towards *clean hands* in health facilities, people at all levels need to unite in believing in the importance of hand hygiene and IPC to save lives it. Targeted messages for key audiences for this year's campaign are:

| Health care workers                           | Thank you for leading by example and encouraging others to clean their hands  |
|---|---|
| IPC practitioners                             | Thank you for engaging health workers to be part of new hand hygiene initiatives  |
| Quality and safety leads<br>Facility managers | Thank you for working with infection prevention colleagues to support hand<br>hygiene improvement<br>Thank you for promoting a quality and safety culture to ensure clean hands |
| Policy-makers                                 | Thank you for prioritizing resources, training and programmes on hand hygiene   |
| People who use health<br>care                 | Thank you for getting involved in local hand hygiene campaigns and activities   |

Posters addressing these key target audiences and calls to action are available. Please use this year's approach of thanking people as a positive way of engaging them to take action. These messages are available in all six official UN languages. The posters and a range of additional promotional materials that countries and health facilities will find helpful to promote and ensure visibility of the campaign are available on the <u>WHHD 2022 page</u>. These including selfie boards, a Zoom background, web banners, a flag maker, a poster maker, short animated video and GIFs to help show your support for the campaign and to encourage action. We would like to encourage facilities to arrange a display of the 2022 campaign posters and other materials on their walls, computers, etc.

A <u>campaign toolkit</u> outlines how countries and health facilities can progress their plans in the lead up to 5 May and each year we are also encouraging health facilities to <u>sign up</u> to this annual, global campaign, if they have not already done so, in order to maintain the global profile of the importance of hand hygiene preventing infections and saving lives.
